

## CONTEXT

Artificial intelligence is under regulatory scrutiny with the EU AI Act coming into force. ISO 42001, the first certifiable AI management standard, lets you demonstrate responsible governance and anticipate the incoming legal requirements.

## WHAT THE STANDARD REQUIRES

- An inventory of the organization's AI systems
- AI impact assessments (AIIA)
- Data governance and traceability
- Human oversight mechanisms
- Lifecycle and algorithmic risk management
- Responsible-use and transparency policies

## IMPLEMENTATION PHASES

- |   |                                                              |      |
|---|--------------------------------------------------------------|------|
| 1 | AI diagnosis<br>Systems inventory and context analysis       | 3 wk |
| 2 | System design<br>Governance, policies and impact assessments | 4 wk |
| 3 | Implementation<br>Controls, oversight and traceability       | 6 wk |
| 4 | Internal audit<br>Verification and corrections               | 2 wk |
| 5 | Certification<br>Support during the external audit           | 2 wk |

Estimated timeline: 5-7 months

### RETURN FOR YOUR ORGANIZATION

- ✓ Anticipating EU AI Act compliance
- ✓ Demonstrable AI governance to clients and investors
- ✓ Algorithmic and reputational risk management
- ✓ Positioning as a pioneer in responsible AI

### FREQUENTLY ASKED QUESTIONS

Does it only apply to AI companies?

No; it applies to any organization that develops or significantly uses AI in its processes.

Does it cover the AI Act?

Not identical, but its governance framework eases and anticipates compliance with the EU regulation.

Is it very new?

It is recent (2023), which is a positioning advantage for early adopters.
